BITE DOWN

Your Professional Guide for Controlling Mosquito Populations

Achieve lasting mosquito control with a proven combination of Zoëcon® products. Successful mosquito management requires interrupting the mosquito life cycle. Using these products as part of an IPM program will help reduce nuisance populations and protect against disease-carrying vectors such as the Culex quinquefasciatus, that can transmit St. Louis encephalitis, Western equine encephalitis, and West Nile virus.

**Culex quinquefasciatus data:**
- Size: Approximately 3.96 to 4.25 millimeters long
- Color: Brown, with a darker proboscis, thorax, wings, and tarsi, and a lighter brown head and center.

**Other distinct features:** The abdomen has pale, narrow, rounded bands that take on a half-moon shape.

---

**Behavior**
- Depending on species, most activity takes place from dusk to dawn (Culex) or morning to afternoon (Aedes)
- Often seek shelter in enclosed spaces like garages, sheds, and under or inside homes to survive cold temperatures
- Lay their eggs in standing water

**Habitat (Where to Treat)**
- Live outdoors and may come indoors, but are susceptible to air conditioning
- Rest in tall grass, weeds, and brush near inhabited locations
- Larva develop in storm drains, catch basins, pools, birdbaths, clogged rain gutters, septic seepage, artificial containers and sites that hold stagnant water

**Damage/Risks**
- Most famous for malaria, mosquitoes are also vectors of other diseases such as dengue fever, yellow fever, chikungunya, West Nile and the Zika virus

---

**Life Cycle**
- Mosquitoes go through four separate and distinct stages of life cycle: Egg, Larva, Pupa, and Adult
- How long each stage lasts depends on temperature and species

**Treatment:**

- **Altosid® products**
  - Active Ingredients: (S)-Methoprene
    - Altosid® Pro-G
    - Altosid® Liquid Larvicide
    - Mosquito Growth Regulator (A.L.L.)
    - Altosid® Briquets (30-day, PCO Pack)
    - Altosid® Extended Residual Briquets (150-day)

- **Essentria® products**
  - Active Ingredients: Rosemary Oil, Geraniol, Peppermint Oil
    - Essentria® All Purpose Insect Concentrate
    - Essentria® IC-3 Insecticide Concentrate
    - Essentria® Contact Spray

**SUSTAINED MOSQUITO CONTROL**

You can feel comfortable using Altosid® products in your clients’ backyards, patios, and open spaces. A leader in larvicides, Altosid® products are used by major mosquito abatement districts, the military, and international organizations. The active ingredient, (S)-Methoprene, has an excellent LD₅₀ profile resulting in low environmental impact with no bioaccumulation. It is an insect growth regulator that prevents adult emergence by suspending mosquito development at the pupal stage, leading to death due to age or predation.

The Essentria® product line is formulated with naturally derived plant-based active ingredients—including rosemary oil, peppermint oil, geraniol, clove oil, and thyme oil. These botanically based insecticides (or 25b Exempt) offer a natural approach to pest control for the environmentally conscious consumer with little to no risk to humans or the environment.
